

Beautiful balconies

Poppies & Petunias

Poppies and Petunias add **vibrant colour** and can be planted in pots to dress up any balcony.

- Place your Poppies and Petunias in an area with **full sun**.
- **Good drainage** is key. Buy a potting mix that is combined with slow-release fertiliser to help your flowers flourish.
- **Water daily** to keep the soil moist and prevent the roots from drying out.
- Add some liquid or soluble **fertilizer** high in potassium on a weekly basis to double up on the flower production.
- To increase flowering of the Poppies, pull or **cut off** the stems of the dead flower. You can pinch out dead blooms on the Petunias to keep the plant looking its best.
- Iceland Poppies and Grandiflora Petunias are best planted in **autumn** and will transform your balcony into a winter wonderland.
